EXPERIENCE HIGHLIGHTS

LEADERSHIP AND MANAGEMENT

- Development of a complete WEB application platform named gEMA: a platform to control the planning of the educational institutions of the community of Madrid, Spain.
- Project leadership in daily operations and infrastructure services in telecommunications, execution of diverse simultaneous tasks.
- Performance autonomy.
- High competency in implementing the company's norms and policies towards a secured and safe working environment in the IT area.
- Team building and motivation towards group integration, especially in multicultural teams.
- Assembling and coordination of an international multidisciplinary team, including members from Venezuela, Malaysia and USA.
- Consciousness and initiative for cost saving in new projects' performance/execution.
- Prompt responses to emergency situations and troubleshooting of high-level problems.
- Effective communication skills with work groups and clients.
- Significant saving in projects execution time where all the technological infrastructure migrated 100% successfully (within a framework of twelve (12) servers applying different efficient functions, and a group of 500 users). Obtained the first case of success in Venezuela by significantly reducing the budget: 63% in the acquisition of new technologies, 85% in energy savings, and 75% in the implementation of new technologies using NComputing.

MAIN (PROFESSIONAL) ACCOMPLISHMENTS

- Developed the first data migration project in South America (Shell desktop environment).
- Obtained international recognition for Trust Domain by Shell's Global Director, awarded for project completion within a time and budget reduction of a 50% globally.
- Implemented improvement practices applied in Shell Venezuela in all Shell companies in South America.
- Obtained the first case of success in Venezuela by significantly reducing the budget: 63% in the acquisition of new technologies, 85% in energy savings, and 75% in the implementation of new technologies using Ncomputing.
